# One Solution Can't Hold It All

Cybersecurity collapses without layers of defense

Relying on one tool for security is too risky.

Not every tool fits every gap. Build a thoughtful, layered defense.

Attackers only need to exploit a single weakness to bring it all down.

The strongest stack starts with informed people. Stay alert, stay secure.

When one safeguard fails, others must catch the fall. Backups, monitoring, and incident response plans ensure you can recover quickly and minimize damage.
