

THE MOST EFFECTIVE AND EFFICIENT DISINFECTING PROCESS AVAILABLE

STERAMIST™ BINARY IONIZATION TECHNOLOGY®

SteraMist™ disinfection is effective against Influenza A and similar, enveloped viral threats including COVID-19 (coronavirus). This patented two-step process activates and ionizes a 7.8% Hydrogen Peroxide based solution into a fine mist/fog known as ionized Hydrogen Peroxide (iHP) to effectively kill 99.9999% of bacteria and fungal spores and inactivate viral cells within five seconds. This allows for the quick decontamination of targeted areas, objects and large spaces.

MEDICAL FACILITIES - SCHOOLS - COMMUNITY - OFFICE BUILDINGS - RESTAURANTS

SteraMist disinfection and decontamination is safe and suitable for a variety of locations including hospitals and healthcare facilities, nursing homes, commercial businesses, multi-unit residential structures, schools, daycare facilities and many more. This technology produces non-caustic, visual mist that spreads like a gas and dries with no residue, no wiping, and no environmental hazard.

Epic Restoration, LLC is proud to be a member of the TOMI Service Network (TSN) and is exclusively licensed and trained to use the SteraMist Binary Ionization Technology® system and solution. We utilize the most modern technology available in our disinfecting processes, including this EPA registered tool to assist in the Greater Ohio Valley's disinfection/decontamination, deodorizing, and mold remediation needs.

This service is offered 24/7 to meet the needs of any location or business.
