

# OUR PEOPLE TAKE PRIDE IN THEIR WORK

## EMPLOYEES OF THE MONTH:

OCTOBER 2017

Foreman Richard Gove exudes our values in, “Our People Perform” and “Our People Take Pride in their Work.” During the renovation of the Carnegie Institute of Science, Richard crawled above a highly congested \$1 million ornamental mural ceiling to find efficient ways to run ductwork, piping and equipment. He worked closely with our client to plan around important events. His confidence and skills led to the successful installation of the air handler unit in the interior wall of the Rotunda.

NOVEMBER 2017

The tool team comprised of Nate Jackson, Jennifer Hottle, Matt Bennett and Mike Fisher have all equally shown their willingness to go above and beyond. They worked tirelessly sorting, testing and organizing our fabrication shop tool area. Additionally, their willingness to complete in-house inventory and update our Tool Watch Cloud System now provides us with the most accurate data. The Tool Team continues to redefine how tools, equipment and safety gear are tracked and accounted for on a job-by-job basis.

DECEMBER 2017

Pipefitter Miguel Calderon played a major role in overcoming challenges during the completion of the Corcoran Gallery Phase 1.4A project in Washington, D.C. His outstanding work ethic and great attitude is demonstrated daily, as he comes to the job with a new take on how to conquer challenges and be an asset to his team. Miguel's continuous efforts to think outside-the-box with a smile on his face is very much appreciated by his co-workers. His innovative thinking has led to several resolutions when working in extremely tight spaces.

JANUARY 2018

Plumber Alex Suarez has shown a commitment to safety by following OSHA rules and regulations and by obtaining good safe cards from the general contractor, Hensel Phelps during his work on the MWAA Dulles Corridor Metrorail Shop & Yard Project. In addition, he keeps a tidy job site and makes sure equipment and items are out of harm's way before the days end. Alex has been persistent running various tasks that the project demanded get completed on-time.
