

OUR PEOPLE TAKE PRIDE IN THEIR WORK

EMPLOYEES OF THE MONTH:

Milo Seitzinger

OCTOBER 2018

Senior HVAC Service Technician Milo Seitzinger's ability to assess issues correctly the first time and carefully document detailed findings has been extremely pivotal in keeping our largest service client more than satisfied. He designed checklists and protocols has been valuable to better adhere to the client's needs for proof of scope. Milo has demonstrated passion for his craft and commitment to the client through his early arrivals and late departures from the job site. He maintains a great working relationship with the clients, and for that S&D sees huge potential for us to expand in the data center market.

Leo Alvarez

NOVEMBER 2018

4th year Plumbing Apprentice Leo Alvarez has exemplified our first three core values on both the Fannie Mae and 1100th 15th Street projects: our people perform, do the right thing and take pride in their work. His willingness to learn and conduct research on his own demonstrates his ambition and commitment to the team. He takes great pride in his work, and takes extra steps to improve his skills. With only a year at S&D, he has already proven to be a great asset to the team.

Dwight Heidel

DECEMBER 2018

To solve a discrepancy between two parties, Project Manager Dwight Heidel's ability to be organized, detail orientated and determined has proven to be successful. His team has noticed the endless hours he spent researching data and compiling documents to support a claim. By taking pride and ownership of his work, he was able to clear up any question or confusion related to the project to satisfy our client's needs. With consistent communication, the issue was resolved in a timely and professional manner.

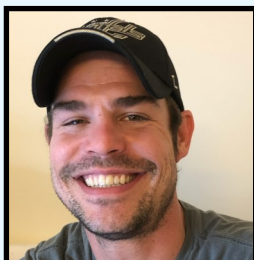

Matthew Kirkland

JANUARY 2019

Pipefitter and Welder Matthew Kirkland dedicated countless hours on the Navy Federal Credit Union project in order to keep up with the demanding schedule. His team appreciated the overtime and the long 4-hour commute he takes to get to the job site and make sure all the pipes are welded properly. His supervisors are most impressed with his eagerness to learn Procore in order to better understand the job. His ability to learn quickly and maintain a positive attitude makes him a pleasure to work with.

Eddie Smith

FEBRUARY 2019

Foreman Eddie Smith was initially introduced to the Whittle School project to perform demolition and to help bridge our pre-construction and engineering departments. He has made himself invaluable to the project and has been remarkable at taking on the role of head foreman on such a massive job. His teammates describe him as having a "keen sense of innovation." He has devoted time researching systems and provided recommendations to get the design finalized. This was not an easy task as a substantial portion of the existing hydronic piping, ductwork and equipment will remain in the building. All parts will need to tie into new controls and mechanical infrastructure. It's apparent through his critical thinking and leadership skills, he takes extreme pride in his work.
