

# Capitalization Requirements

**Capital** is money, machinery, tools, equipment, and buildings that businesses need for operation. JA companies obtain operation capital by selling shares. It is important to raise no more or no less capital than required.

**Overcapitalization** When a corporation raises more money than it needs.

Overcapitalization is wasteful because it represents assets that may have been used elsewhere to produce wealth. It also creates an unnecessary burden on a company because it must pay dividends to investors it did not need in the first place.

**Undercapitalization** Undercapitalized firms are those with insufficient funds to meet their current expenses. In such a situation a company must find a way to raise additional funds, or face bankruptcy.

**Initial Capitalization** This is the amount of money required to start the business.

## INITIAL CAPITALIZATION CALCULATION

<b>Total Fixed Costs until Week 10</b> (FIN2 – Break Even & Pricing)	\$
<b>Raw Material</b> Material Cost per unit \$ _____ X Break-even units _____ = (FIN1 – Product or Service Cost)	\$
<b>Wages and Salaries</b> (FIN2 – Break Even & Pricing)	\$
<b>Commissions</b> Commission rate ____% X Selling Price per unit \$ _____ X Break-even units _____ =	\$
<b>SUB-TOTAL (A)</b>	\$
<b>Less (B):</b> Anticipated sales revenue first 10 weeks (assumes one third of Break-Even Point sold in first 10 weeks) (Break-even units _____ / 3) x Price per unit \$ _____ =	-\$
<b>INITIAL CAPITAL REQUIREMENTS</b> A-B	\$

Initial Capital Requirements divided by par value of each share equals the number of shares required.

This will require \_\_\_\_\_ shares @ \$ \_\_\_\_\_ each.
