

Mrs. Urkevic's Science Club  
Grades 3-5

**POSSIBLE** third and final Science Club of the year! As this session will go to the end of the school year and student have various activities, I will do this session only if I have enough students participating. We will be doing a unit called "Lift off: Engineering Rockets and Rovers". We will be designing and testing rockets and rovers to explore several planets and moons. We will first test rocket designs, then create rovers, and finally send the rockets and rovers into space with a "stomp launcher". What rocket design will take our rovers into space?
