## Meet a NASA Emeritus Docent (Eagle Scout and Girl Scout Docents)

Scouts will meet with NASA engineer/scientist docents and hear about their past or current projects, their experiences in the field of engineering/science and what education is needed to become an engineer/scientist.

## Grab Bag Engineering: How far can you go?

Design, engineer and test a simple machine. Each scout will get a bag to collect materials to build a simple machine capable of launching a ping-pong ball 36 inches away from the simple machine.

## Spacecraft: Design, Build, Test

Scouts will imagine a scientific mission to space, draw inspiration from existing spacecraft and design and build their own simple model spacecraft to accomplish the goals of their mission. After assembling a spacecraft, scouts will test their designs to ensure they're ready for launch.
