

Acquired Brain Injury Education and Prevention Services

Who are we?

The Acquired Brain Injury Partnership Project is part of a comprehensive strategy, managed by Saskatchewan Health, funded by Saskatchewan Government Insurance (SGI). Our education and prevention coordinators are an important component of the three regional multidisciplinary outreach teams.

Program Objective

The primary function is to provide education and injury prevention information through community development.

Mild Brain Injury

We provide education and resources for individuals who have sustained a mild brain injury/concussion. Information for family, coaches, educators and community members is also available. Resources identify common symptoms of mild brain injury, discuss the effects of the injury on the client and provide tips for healing.

Brain Waves A free, fun and interactive half-day neuroscience presentation for students in grade 4-6. Students learn about different parts of the brain, basic neuroscience vocabulary, and how and why it's important to protect their brain and spinal cord. Information will assist student awareness of the brain and the spinal cord, and provide simple injury prevention strategies.

SASK SMART We focus on injury prevention messaging through social media such as: Buckle Up, Look First, Wear the Gear, Get Trained, Drive Sober & Seek Help.

We work with your school or community to provide brain education that is easy to understand. This program provides grade K-6 students with an opportunity to learn the different functions of the brain, and how to keep their brains safe and healthy. Students rotate through 10 interactive volunteer-run stations, filled with displays, demonstrations & activities.

We will work with your community to plan this dynamic, interactive injury prevention and health promotion program for teens. Students learn about the path of an injury survivor from the injury through medical rehabilitation and community reintegration. Interactive sessions are provided by local emergency, enforcement, health and other professionals involved in trauma situations.

We can also support you in initiatives focused on:

- The Brain and Keeping It Healthy
- Helmet Usage
- Safe Driving & Pedestrian Safety
- Off – Road Vehicle Safety (snowmobile and ATV safety)
- Child Passenger Safety
- Falls Prevention
- Sports & Recreation Safety

Contact the Education and Prevention Coordinator in your area:
