

## Forensic Engineers and Consultants

### Civil/Structural Engineer – New England Area

**We are looking for someone wanting to work in: Rhode Island, Connecticut, Massachusetts, or Southern New Hampshire**

We are currently seeking a Civil/Structural Engineer to assist in the determination of the origin, cause and extent of structural failures, water intrusions, construction defects and other failures to join our team. In return for your talent and effort, we offer our full-time employees a competitive benefits package—including medical, dental, vision, life, disability, employer-matching 401(k), a flexible work schedule, and opportunities for advancement.

### Responsibilities

Duties in this key position involve the investigation and analysis of residential, commercial, and industrial properties for the purpose of resolving claims and legal disputes. Assignments may include foundation settlement investigations, structural assessments, site evaluations, sub-surface investigations and vibration analysis. Prepare oral and written reports that document causes of failure, extent of loss, and recommended remediation. Provide opinions and expert testimony. Other duties include gathering photographic evidence, conducting investigations to document onsite conditions and oversee field-testing.

### Qualifications

- BS Civil or Structural Engineering
- PE License required
- 8-10 years' experience
- Project Engineering/Management experience
- Independent judgment; strong analytical skills, excellent verbal and written communication skills
- Ability to climb roofs and lift up to 50 pounds
- MS Word, Excel, PowerPoint
