

## Health Information Exchange

Mercy Care has a strategic partnership with Health Current, Arizona's statewide health information exchange (HIE) to improve the electronic data connectivity of the overall healthcare system. We collaborate on training and education related to the HIE services available and offer support with technical assistance for those seeking to establish a relationship with Health Current.

We would like all participating providers to engage and utilize the services the HIE offers as we feel these services improve communications, timeliness of services, and sharing of critical health care information. Mercy Care promotes the use of the HIE with all providers and encourages the use of the secure communications offered. Services offered include alert notifications from hospitals and other facilities when Mercy Care members are admitted, transferred, or discharged along with direct email and a provider portal that houses clinical data. More information on Health Current or HIE services can be found on [www.healthcurrent.org/hieservices](http://www.healthcurrent.org/hieservices).
