

Lake Levels of Lake Ontario - Plan 2014

Great Lakes' water levels were above average in the summer of 2020 causing erosion, shoreline flooding, and other challenges to homeowners, businesses and local governments. These challenges have resulted in local advocacy groups in Ontario and New York asking the International Joint Commission (IJC) to review their policies. Over the summer, the effects of high waters were raised with many municipal councils and with Members of Parliament resulting in webinar consultations. To learn more about the high-water levels, how the IJC manages water levels, and resources available to your community please visit:
