

Introduction to the 5S System

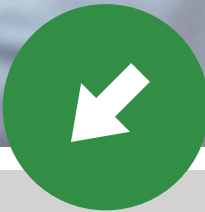

Introduction to the 5S System is an applied Lean workshop focused on the 5S workplace organization method. Participants learn how to use 5S to improve organization, reduce waste, and strengthen a culture of continuous improvement.

The Workshop » This workshop includes a half-day classroom session—held onsite for private groups or in a shared space for public sessions—featuring interactive instruction and hands-on activities. The session is followed by two hours per company of onsite project work at the company's facility, where participants apply 5S principles to a real workspace.

Who should attend? » This workshop is designed for anyone looking to improve workplace organization including team members in manufacturing, offices, warehouses, labs, and shared or common work areas.

Key Takeaways » Participants will learn how to apply the five steps of 5S—Sort, Set in Order, Shine, Standardize, and Sustain—to create a clean, organized, and predictable workspace. They will understand how 5S supports efficiency, safety, and employee satisfaction, and will leave with the skills to lead and maintain a 5S project in their own area.

Program Specifics » The half-day classroom session is supplemented with a two-hour onsite project, totaling six hours of training. Enrollment is limited to 12 participants to ensure hands-on support. The program may qualify for up to 50% reimbursement through the Harold Alfond Center for the Advancement of Maine's Workforce, depending on eligibility.

“We had a wonderful day of learning methods to hone a Lean Manufacturing approach that promotes excellence, efficiency, and standardization, all of which will advance Maine’s workforce development and positioning to lead in the innovation of new products.”
