

Neil Roger's AV Fund

Reaching our full \$30,000 goal, we'll be able to purchase two additional cameras (\$1300) to capture the flow of our service between music, speakers, and audience. With better microphones, (\$2000) we can hear speakers and the choir and music more clearly, and with quality speakers (\$8000) and amplifiers (\$4000) the back row will be able to hear just as well as the front row. An updated digital mixer (\$6000) will provide easy control and recall of equipment settings so volunteers can manage the A/V system more smoothly.

We need \$8,000 more in contributions to cover the professional installation of this equipment (\$6000) and for upgrades to the broadband connection serving the whole campus (\$2000).

With the stock market rising, and people going back to work, we are appealing to all our members and friends to do their best. We will use these upgrades to provide quality broadcasts that reach our remote viewers and members who aren't able to attend church in person, as well as people shopping for a new church. And listening to performances by the choir and other musical groups will be much improved.

Further enhancement to Sanctuary lighting such as LED lights and a control system for color and dimming is also possible with more contributions.

Thank you for generously helping us reach our goal!
