

Leverage Personalization to Increase Efficiency in Hyperspace!

Personalization is one of the most powerful features of Epic and allows you to set up Epic to suit your individual needs.

You are ***required*** to do at least the minimum personalization consisting of:

- Create at least 1 SmartPhrase
- Favorite at least one order

However, the more personalization you do, ***the more efficient you will become and the less time it will take to complete your work.***

Other helpful Epic Personalizations are:

- Create SmartForm macros
- Create and Organize Preference List Sections
- Create Order Panels
- Create user versions of order sets
- Favorite frequently used Charge items
