# Orders: Display on AVS – RX Routing

When a provider is discharging a patient but does not want to E-prescribe a medication, there is an option to only display on the After Vist Summary and not create a new prescription. This change can be done for individual medications or for all orders on discharge.
How it Works

1. Open the order composer for desired medication, toward the bottom of the screen change the Class to "AVS only – no ERX".

2. You can modify new prescriptions, by clicking the pencil icon on existing home meds or inpatient medications reconciled to continue with the Plus sign .

RX Routing
By using **Rx Routing** in the Discharge Navigator, you can set the default for medications for this patient.
1. From the Discharge Navigator, select the Rx Routing section on the left.
2. Change the Default Prescription Routing to "AVS only – no ERX".
