

# Inpatient Nurse: Pyxis Medications

Patient profiles in the Pyxis machines will **ONLY** list the medications that are dispensed via the pyxis machine. The full list of patient medications will need to be viewed in the patient chart.

## How it Works

1. Open Patient chart to the MAR activity
2. Default tab is full list of All medications
  - a. Active medications are listed at the top
  - b. Scroll to view medications that are completed or discontinued separated by the appropriate banner.

The screenshot shows the Pyxis MAR interface. At the top, there are tabs for Summary, Chart Review, MAR, Flowsheets, Notes, Education, Care Plan, Orders, and Navigators. The MAR tab is selected. Below the tabs, there are filters for ALL, Scheduled, PRN, Continuous, Respiratory, Due/Overdue Meds, Override Pulls, and Chemo. The main area displays a list of medications with their dosages and administration status. Red circles 1, 2, and 3 highlight specific areas: 1 points to the 'ALL' tab, 2 points to the 'Completed Medications' section, and 3 points to the 'Discontinued Medications' section.

3. In the MAR toolbar, Click the **Report** button for a report view of all medications.

The screenshot shows the Pyxis MAR interface with a detailed report for a patient. The report includes a table of medications with columns for dates and a 'Report' button highlighted by a red box. The table lists medications such as cyclophosphamide, factor Xa, inactivated, and adult multivitamin. The report also includes a section for discontinued medications.

## Learn More

Each medication row will provide information on the dispense location of a particular medication

Dispense Location: Floor Stock

## Remember

With the changeover to Epic, full list of patient medications will NO LONGER be viewable in the Pyxis machine. Only medication orders that will be dispensed by Pyxis will appear in the patients' profile on Pyxis. Full Medication lists for the patient are to be viewed in the electronic medical record.
