

E-Waste (electronic waste) is the fastest growing waste stream in the country. Old electronics account for 2% of the garbage in landfills but represents 70% of the toxins. Because electronics are becoming so cheap to manufacture and purchase, we are becoming a disposable society. **Sensible Recycling** is stepping up to provide our community with a responsible, no-cost service to dispose of, and recycle computers and electronics. Old electronics do not belong on the curb with your trash where they will find their way into a landfill.

Sensible Recycling is an electronics recycling and computer recycling company located in **Jacksonville, FL**. We exist to help keep our community clean by properly **recycling electronics, computers**, and old IT equipment in a manner that adheres to or exceeds Governmental laws and regulations that pertain to the responsible *recycling of e-waste*.
