Jordan presents VOSH-funded research at the Moorfields UAE Conference

Professor Yazan Gammoh, Head of the Optometry Department and Faculty Adviser of the SVOSH chapter at Al-Ahliyya Amman University in Jordan, was invited to present at the Moorfields Eye Hospitals UAE annual conference. This event serves as a comprehensive yearly review of significant clinical advancements, educational highlights, and research breakthroughs across ophthalmic subspecialties. It is designed to support continuing professional development and enhance clinical practice in eye care.

Prof. Gamoh presented findings from his research co-published with Prof. Bruce Moore on **Vision screening and detection of ocular abnormalities in school children by teachers in Jordan.** The presentation was well received, prompting discussion on how school screening models in Dubai and UAE could incorporate this multidisciplinary collaborative approach. Future discussions on the model's adaptation are expected.

Dr Gammoh at the meeting organized by the Jordanian Institute for Family Health.

Additionally, the Institute for Family Health in Jordan has also found the research, particularly data on refractive error distribution, valuable for strategic planning and public awareness campaigns in eye care..

We congratulate Prof. Gammoh on the recognition of his work and its growing impact among decision makers and planners.
