The World Forum for Uncorrected Refractive Error

The OneSight EssilorLuxottica Foundation is convening the **World Forum for Uncorrected Refractive Error** virtually from **September 22-24, 2025** from 2:00pm-5:00pm Paris, France time (CEST). Aligned with the **WHO SPECS 2030 Initiative,** this event will bring together key stakeholders from governments, NGOs, the vision care sector, academia and other advocates to align on strategies, gain new insights, challenge traditional approaches, build networks, and explore innovative ways to co-create a shared future for eye care.

This 3-day convening aims to highlight innovative solutions and foster cross-sectoral collaborations, under the five SPECS pillars, that will propel countries toward achieving the global targets in effective refractive error coverage (eREC). Through a series of engaging keynotes and panel discussions the Forum will provide a platform for participants to co-create actionable strategies, build partnerships and encourage commitments that will accelerate progress toward a world where everyone has access to the vision care they need.

Goal

To convene and unite diverse stakeholders, both within and outside eye care, including NGOs, government representatives, researchers and professionals, in advancing a public health approach to vision care under WHO SPECS 2030. We will accomplish this by fostering collaboration, innovation, and actionable strategies that address refractive error and build sustainable systems to ensure equitable access to quality vision care for all.
