

ENLIST™ HERBICIDES

TANK-MIX SEQUENCE PROCEDURES

Be sure to start with a clean sprayer before mixing a load with Enlist herbicides. Remember the required water carrier volume with Enlist herbicides is 10–15 gallons per acre. For more tips on sprayer setup, see the Enlist herbicides application guide.

LIQUID CARRIER

- Begin with half-full tank of water
 - Begin agitation and continue throughout mixing process
 - Add products in order:
 1. AMS / water conditioning agents
 2. Pre-slurry water-soluble packets
 3. Wettable powders/dry flowables
 4. Compatibility agents
 5. Liquid flowables
 6. Capsule suspension (CS) or suspension emulsion (SE)
7. Emulsifiable concentrate (EC)
 - Soluble liquids (SL)
 - Enlist Duo® herbicide at 4.75 pt/A
 - Enlist One™ herbicide at 2.0 pt/A – **When mixing with Enlist One, do not pour glufosinate ammonium products or glyphosate potassium into the tank at the same time as Enlist One. Add products one at a time, allowing enough time for recirculation between additions of each separate product.**
 - Glyphosate products
 8. Crop Oil Concentrate (COC), NIS, other adjuvants
 9. Top off with water carrier
