ADVANCED ADJUVANT SYSTEM

PLEXUS[®] II

Proprietary blend of modified alkanotes, polymers and surfactants100%

TECHNICAL INFORMATION BULLETIN

What is PLEXUS II?

PLEXUS II is a complex network of systems linked together to create a superior, efficacious, efficient and easy-to-use adjuvant.

PLEXUS II is the ideal adjuvant to maximize performance of tank mix pesticides requiring MSO, COC, NIS or HSOC, while providing superior deposition and retention qualities.

What does PLEXUS II do?

- Stable, easy-to-use product in one jug
- More rate-efficient than any other adjuvant on the market
- More activity per unit of product
- Reduces fines - gets product to desired location
- Increases retention, wetting, spreading and pesticide coupling
- Increases penetration at the cuticular and cellular level

Tested and Approved for use with Dicamba Technologies

Mixing Instructions

Always add PLEXUS II last to the spray mix and continue agitation, unless directed otherwise by the specific pesticide label. Always follow the label of the specific pesticide for detailed adjuvant use directions.

A nitrogen source may be added to PLEXUS II when required or suggested by the pesticide label.

Rate

Ground:

- 10-12 oz./Acre, <12 gallons per acre spray solution
- 12 oz./Acre, >12 gallons per acre spray solution

Air:

- 1% v/v, <5 gallons per acre spray solution

Package Size

2x2.5's

120's

250's
