May 26, 2020

Conference
Opens

Dear reader,

One of the biggest global food safety problems that needs to be addressed is contamination and how to prevent, detect and analyse the routes and sources of contamination to contain the incidents and restrict the number of victims.

Therefore, in close cooperation with Acad Indus International Conventions, the Global Harmonization Initiative (GHI) is organising "Food Contamination & Traceability Summit" between 26-27 May 2020 at Munich, Germany.

Delegates, speakers, and partners of this event will contribute to the challenges faced by the industry and consumers in the areas of food safety, authenticity and traceability.

We actively encourage participation from food scientific community, food legislators, food inspectors, food analysts, and technologists. We welcome the partner members and professionals working in this area to our first edition of the summit in the unique and beautiful city of Munich, Germany.
