

Proper Swim Attire

What is proper swim attire?

Proper swim attire is made up of nylon, polyester or lycra materials and designed specifically for the activity of swimming. This includes swimsuits, rash guards, and swim trunks.

What is not allowed in our swimming facility, which includes the hot tub, sauna and steam room?

- "Street clothes," such as jean shorts, spandex or yoga type shorts and pants, running and workout shorts, basketball shorts, leotards and dri-fit wear or any other sportswear you would workout in.
- Brazil/French-cut, thong style and/or revealing swim wear is not allowed in our facility to maintain our positive, family centered atmosphere.
- Sport bras not made specifically for swimming.
- Cotton garments such as shirts, shorts and sport bras.

Why are these garments not allowed?

- Street clothes, particularly cotton, can transport contaminants into our pool which clog the filter system of the entire facility.
- Fibers from apparel that is not made of nylon, polyester or lycra can and will clog the filters.
- Fibers which have been dyed and not made specifically for swimming, can and do bleed, affecting the water chemistry leading to pool closures.
- Fibers, not specifically made for swimming, absorb pool chemicals affecting our ability to maintain proper chlorine and pH levels. Improper chemical levels lead to pool closures.
