

5 Things to Know About COVID-19 Vaccines

1

Vaccines are safe and effective

Clinical trials were done right with a diverse and large group of participants

2

Vaccines build immunity and can't give you COVID-19

It takes some time and the full number of doses for immunity

3

Vaccines will take time to give out

We use a distribution plan that makes sure those at highest risk can get vaccinated

4

Vaccines are free to all adults

Even if you don't have medical insurance, a doctor, or citizenship

5

Vaccines are one of many tools to end the pandemic

We have to keep wearing masks, stay 6 feet apart, and follow public health guidelines.
Vaccines help keep you and your community safe
