

Getting Started in Panopto

Enable Panopto

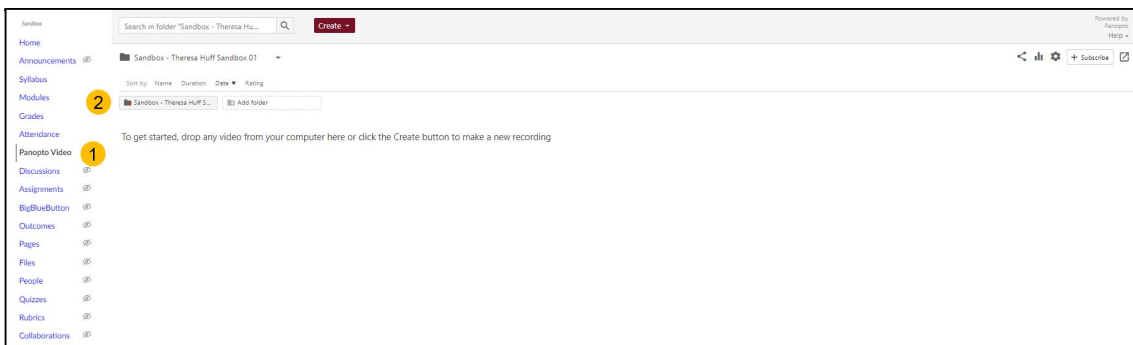

Before you can use Panopto, you will need to enable it in your courses.

To enable Panopto in your course, select **Settings** [1], select the **Navigation** tab [2], find and drag the **Panopto Video** tab up to the enabled Navigation tabs, and select **Save** [4].

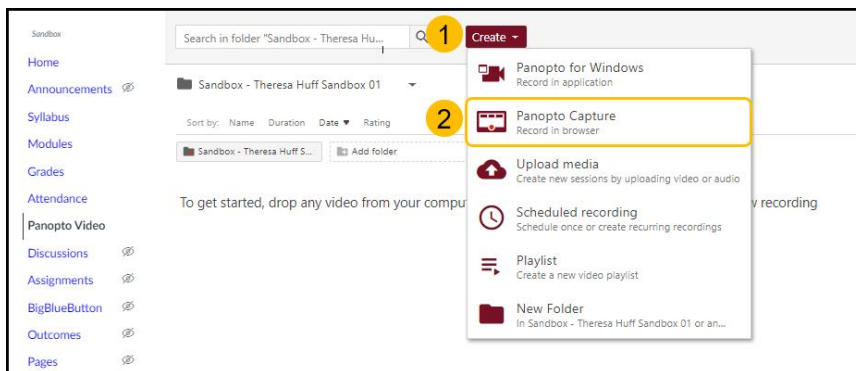

Panopto in Canvas

When the **Panopto Video** tab [1] is selected from the Course Navigation, the new Panopto page is displayed. Panopto automatically creates a storage folder for this course's videos [2]. This video folder will have the same name as the course.

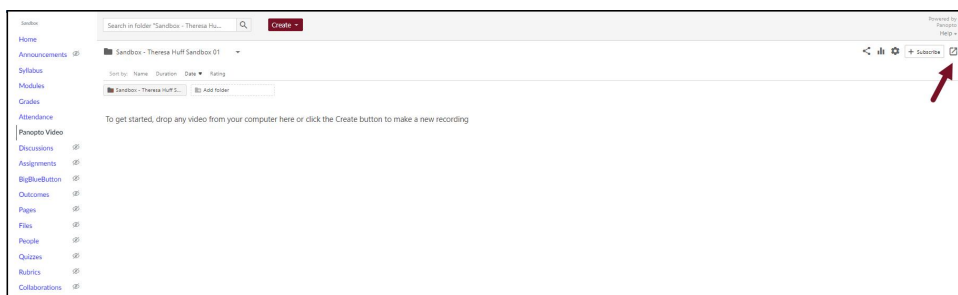

You can create new videos for your course from this page by selecting the **Create** button from the top of the page [1] and then selecting **Panopto Capture** [2].

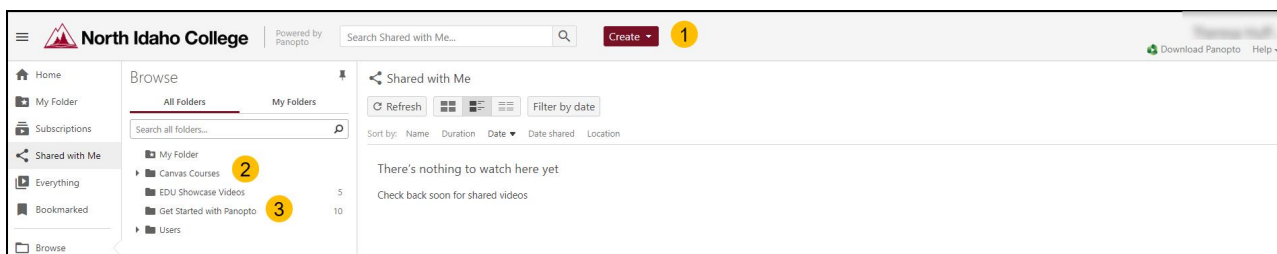

Panopto Website

To go to your video library within Panopto's cloud-based website from your Canvas course, select the arrow-in-a-box icon located at the top, right of the **Panopto Video** page.

From your video library in the cloud, you can create new videos by selecting the **Create** button from the top of the page [1], view videos from each of your **Canvas Courses** [2], and access helpful videos for getting started with Panopto [3].
