

## Securing UI IT Systems Webinar and Resources

In July, NASWA held a webinar discussing the recent changes to NIST SP800-53 Rev 5, managing Personally Identifiable Information (PII) and preparing for Ransomware attacks. During the webinar, NASWA's security team highlighted sections of the new NIST guidelines that are important specifically for state UI IT systems and described several resources and services that the NASWA team provides to state workforce agencies.

The webinar presentation and recording are posted on the UI ITSC website, which also houses UI ITSC's security information and resources.

For more information on UI IT security, contact the NASWA security team at [securitycorner@itsc.org](mailto:securitycorner@itsc.org) or visit [www.itsc.org](http://www.itsc.org).
