

UI ITSC Launches New Website

UI ITSC launched a new and updated website in March. The UI ITSC’s website is a unique resource for the UI community to share and access information on IT tools and solutions related to the UI program. Hosted on a SharePoint environment, the website serves as a collaborative workspace for states to interact with each other and UI ITSC to share and leverage lessons learned and successful state practices. Below are some highlights with clickable links to explore the updated website.

[New Design, Look and Feel](#)

The website now follows the overall branding for NASWA and is fully responsive for any device or browser which provides a better and cohesive experience for our members. In addition, UI ITSC refreshed the website content and streamlined the site navigation for members to easily navigate and find available resources.

[Updated UI IT Modernization Status Maps](#)

Under “UI IT Modernization,” UI ITSC has provided an overview status of state UI IT modernization projects. With the refreshed website, the maps now display the status of UI Benefits and Tax systems separately.

[UI IT Security Resources](#)

The website features an improved UI IT Security section. This section is restricted to state and federal UI employees. Resources include checklists on preparing for security audits, information on UI in the Cloud, and recently published “Security Guidance Supporting UI IT Modernization” that incorporates changes from NIST SP800-53 Revision 5.

Sign Up to Access Member Resources: State and Federal staff within the Unemployment Insurance (UI) program can request access to the UI ITSC website’s member area. Contact webmastersupport@itsc.org to create an account.
