

Fun with Colourful Bubbles!

Painting with coloured bubbles is a fun way for infants to learn about the properties of light and diffusing colours. Observing and questioning what they see is an important building block for STEM learning.

What you need:

- Paper (a long roll of printer paper works best, but any kind of white paper will do).
- Multiple containers of bubble solution
- Food colouring

What to do:

1. Open the bubble containers and several drops of food colour into each bubble solution
2. Blow the bubbles in the air in the direction of the paper.
3. Repeat with different colours of bubble solution
