

# Sparkly Icicle Craft

This Sparkly Icicle craft is a wonderful way to bring the beauty and magic of winter right into the home. This fun icicle craft is a great way for kids to explore and celebrate the winter season but also focuses on gross and fine motor skills.

## What you Need:

- Aluminum foil
- Silver twine/string
- White glue
- Blue glitter
- Paper Plates

## What to Do:

1. To make a sparkly icicle, start by cutting a piece of aluminium foil into a triangle. When cutting – make sure it is a few centimetres longer than you want your icicle to be.
2. With the aluminium foil shiny side down fold over the bottom of your triangle, just a few centimetres to help strengthen the finished icicle.
3. Cut a piece of silver twine/string, tie it into a loop and glue it onto one end of the folded aluminium foil so it sticks out of the top, you could also use sticky tape if you prefer.
4. To form your sparkly icicle, loosely roll the aluminium foil width-ways, making sure your string is still hanging out at the top.
5. Once you've rolled your aluminium foil, gently squeeze along it's length to make the shape of your icicle.
6. Use white glue to apply a shimmery shiny layer. Apply randomly all over the icicle. You can then sprinkle on your glitter. Do this over a paper plate to save the glitter from going everywhere!
7. Once the glue has dried finish off your sparkly icicle craft by shaking off any loose glitter and hanging them on display.
