

Spray Snow Paint

Creating your own spray snow paint is super simple! It's a fun outdoor activity for a snowy day, and kids will also develop their fine motor skills while using the spray bottles.

What you need:

- Plastic spray bottles
- Liquid Concentrated Food Colour – you can use regular food colouring, but you'll need to use the full bottle. The benefit of the liquid concentrated food colouring is that you don't need as much. It also gives much more vibrant colours.
- Water
- Optional: Dish gloves/rubber gloves to put on over your regular winter gloves/mitts
- Optional: Garbage bag to wear overtop of winter gear (as the food colouring can stain clothing.)

What to do:

- 1.Fill your spray bottles with water
- 2.Add 4-5 drops of concentrated food colouring to each bottle. Shake the bottle to mix the food colouring with the water. You may need more or less depending on the size of the bottle and how much water you use. The colour in the bottle should be a dark colour.
- 3.If you do find the colour is coming out a little dull, just add another drop into your bottle.
- 4.Make sure to follow one rule while snow painting: you must only spray on the snow. Not on fences, houses or each other!
- 5.Head outside and make different designs like snowmen, suns, clouds, trees and even abstract art!
- 6.When using the spray bottles, you can adjust the settings to spray narrow or wide (a narrow spray will allow you to make lines while a wider spray will create more of a mist.)
