

Wee Play & Learn

Wee Explorers (18 months - 3 years): Individual Fall Sensory Play with Soap Foam

What You Need:

- Soap foam (instructions below)
- Artificial or real fall leaves
- Individual buckets or bowls of water
- Towel
- Utensils (optional)

To Make Soap Foam:

1. Mix a generous amount of liquid hand soap with a splash or two of water.
2. Use a whisk or hand mixer to mix soap and water until you get a thick, frothy foam.
3. Once your soap foam is made, you can add anything you like: liquid watercolors or food coloring, glitter, etc.

What to do:

1. Make the soap solution with your child in their own individual bucket
2. Ask your toddler to mix the leaves inside the foam mix
3. You can give different utensils (tongs, spoons, etc.) for your child to play with
4. You can make this into a game (i.e. ask your child to find a red colour leaf, or how many green colour leaves are in the bucket, etc.)
