

Telehealth continued.....

It allows a telehealth provider, practicing in a manner consistent with their scope of practice, to prescribe specified controlled substances through telehealth; creates a new type of pharmacy establishment, a “remote-site pharmacy,” and requires the DOH to permit and regulate them.

It **would** allow the Agency for Health Care Administration (AHCA) to reimburse for telehealth services involving store-and-forward technology and remote patient monitoring services under the Medicaid program.

It passed the [Appropriations Subcommittee on Health and Human Services](#) (**Sen Jason Brodeur voted YES**)

A similar House version [H 247](#) by **Reps Fabricio, Giallombardo** is still before the **Health & Human Services Committee**....not moving.
