

SHELTER FROM THE STORM

The VPI High Interest Savings Pool is designed to provide a stable withdrawal source with lower risk of short-term losses than equities or bonds. It does this through exposure to high interest savings exchange-traded funds, money market funds for a yield boost, as well as cash for liquidity purposes.

ASSET ALLOCATION

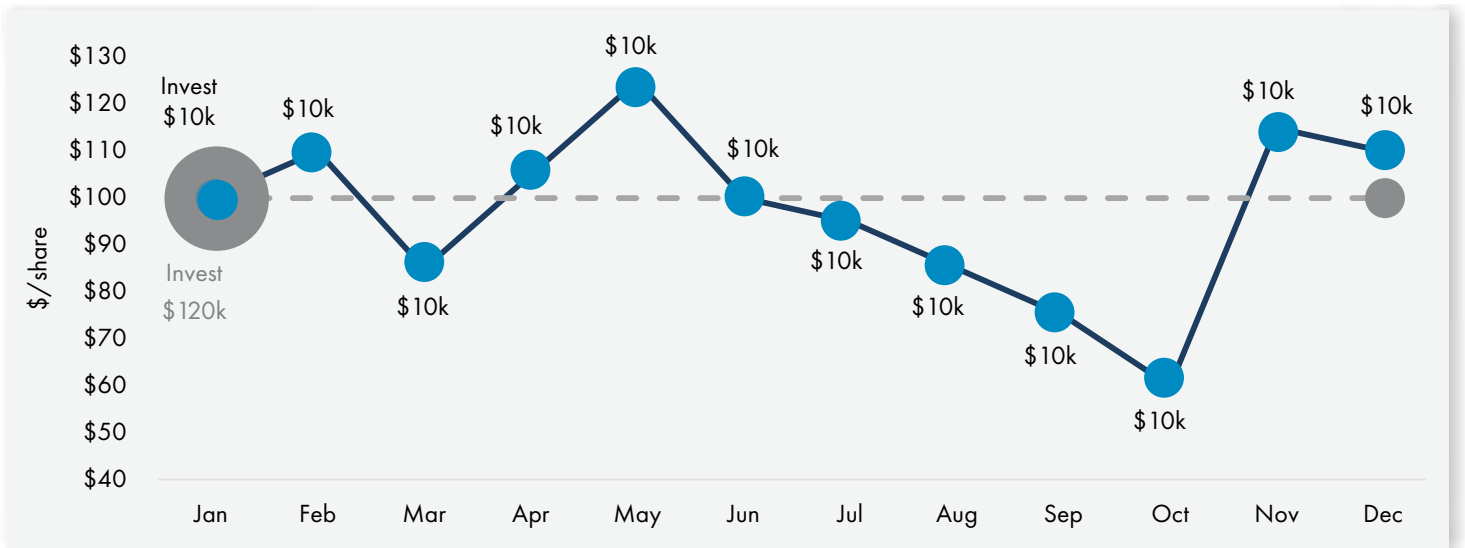

A GREAT WAY TO USE THE VPI HIGH INTEREST SAVINGS POOL

Dollar-cost averaging is a great way to buy shares of industry-leading, dividend-paying companies like those found in the VPI investment options. Here's how it works: take a small percentage of your holdings in the VPI High Interest Savings Pool every month and redeploy them into one of VPI's equity pools. This approach provides exposure to industry-leading companies with a long-standing history of dividend payments.

Note: As of March 31, 2026.

VOLATILITY IS YOUR FRIEND WHEN YOU DOLLAR-COST AVERAGE

You have \$120,000 to invest. You can choose to invest all \$120,000 at once or invest \$10,000 each month for 12 months.

Since the same amount is invested each month, you'll naturally purchase more shares when prices go down and fewer when prices go up.

Invest all \$120,000 at once

End Value: \$132,000

(\$132,000 = 1,200 shares x \$110 ending share price)

versus

Invest \$10,000 each month for 12 months

End Value: \$141,350

(\$141,350 = 1,285 shares x \$110 ending share price)

BENEFITS OF DOLLAR-COST AVERAGING

**Avoid Mistiming
the Market**

**Take Emotion
Out of Investing**

**Think
Longer-Term**

Note: This hypothetical illustration shows how investing \$10,000 each month in fluctuating markets can potentially produce superior returns in a portfolio. However, it should not be inferred that dollar cost averaging will always be beneficial. In rising markets, you may forgo gains that you otherwise would have earned if you had invested your portfolio in a lump-sum.
