

## **“Friends Along the Mullica” Virtual Presentation Series**

**Hosted by the Jacques Cousteau NERR and Go Green Galloway**

*This program series was based on the film “Friends Along the Mullica” created by Go Green Galloway. This film addresses environmental issues being experienced within various towns along the Mullica River/Great Bay Estuary including storm water management, invasive plants, stresses from climate change (flooding, marsh loss, etc.) and marine debris/litter/illegal dumping.*

*Program participants will also have an opportunity to get involved in community-action events related to each topic later in the spring of 2022! Details on community-action opportunities will be provided during each presentation. To learn more about the project or watch the movie, click on the link below!*
