

Getting My Covid-19 Vaccine

Covid-19 is a virus that can make me and other people sick. A vaccine puts medicine in my body to protect me from getting sick.

I want to protect myself and the people around me from getting Covid-19.

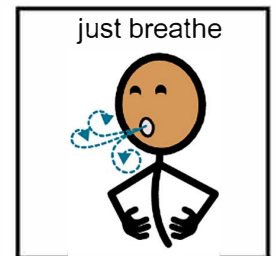

I need to get 2 doses of the vaccine so I don't get very sick.

I will sit and relax, roll up my sleeve, and the shot will go into my arm. I may feel a pinch. My arm will be wiped clean and they will put a bandaid on it.

If I get nervous I can look away, take a deep breath, or hold my caregiver's hand.

After I'm vaccinated, I will still need to wear a mask, wash my hands, and social distance.
