

Hope Starts Here at Lee Health

Breast cancer affects countless families across Southwest Florida, bringing emotional, physical, and financial challenges. **At Lee Health Cancer Institute, patients never have to face this journey alone.** Patients receive compassionate, world-class care, surrounded by the support of family and community.

At Lee Health Cancer Institute, we believe in **supporting the whole person**—not just the diagnosis. Our multidisciplinary care teams include oncologists, nurse navigators, genetic counselors, dietitians, and more supportive care specialists.

Complementary therapies are also available to help **ease side effects such as stress, nausea, pain, and fatigue.**

Every October, our teams celebrate HOPETOBER—a month dedicated to raising awareness, providing hope, and supporting those impacted by breast cancer.

Early Detection with an Annual Mammogram

- » Annual screening mammograms are recommended starting at **age 40**, even without symptoms
- » Up to **98% survival rate** when breast cancer is detected early

Schedule Your Mammogram

We've made it easier than ever to schedule your screening mammogram. Visit your **MyChart® app** or **scan the QR code** to get started!

**Take charge of your health—
early detection saves lives.**
