

PADnet™

Peripheral Vascular Assessment Protocol

In A Changing
 Healthcare World...

Practitioners must adapt to ensure that their patients receive the best level of care, while they receive a fair financial return for their efforts. The Biomedix PADnet Peripheral Vascular Assessment Protocol allows diagnostic tests to be added to patient care episodes, and support time-based E/M office visit coding.

Example Patient Flow

ICD-10 Codes to Support A Full PADnet Arterial Study	
I73.9	Peripheral Vascular Disease, Unspecified
I77.1	Stricture of Artery
E11.59	Type 2 Diabetes Mellitus with other circulatory problems
