

CHECKLIST
OF THE BIRDS OF
YAVAPAI COUNTY

COURTESY OF THE
PRESCOTT AUDUBON
SOCIETY

This checklist was compiled from sightings historically recorded by local birders as well as from submissions to Cornell Lab's eBird database.

Yavapai County spans 8,125 square miles, about the size of the state of Massachusetts. Bird habitat varies greatly based on water resources and altitude variation that ranges from 1800 to 8000 feet, with inaccessible and intermittent waterways throughout. Seasons matter. High-mountain breeders abound in summer while the lakes in Prescott host more wintering waterfowl than any other spot, state-wide. Migrant birds of all types stop in the county but do not always linger. Birders readily encounter the Arizona “specialties” here, like breeding Red-faced Warblers or Pyrrhuloxia, but one must travel many miles to find both in one day.

These challenges have been compressed into four seasons and five abundance codes. Summer and winter seasons are intentionally left short while spring and fall migration seasons are longer to best express what can be experienced when birding Yavapai County. For more detailed month-to-month occurrences of a particular species, we recommend you search the monthly bar charts at ebird.org.

For recent sightings and more information about birding this region, visit our website, PrescottAudubon.org.

With thanks to our checklist compilers, Bryan Patrick and Sue Drown.

SEASONS
Win= December and January
Spr = February through May
Sum = June and July
Fall = August through November

ABUNDANCE CODES
1 = Common, occurs regularly in expected habitat
2 = Expected, but not regularly encountered
3 = Irregular, but possible occurrences
4 = Rare encounters; less than 25 annually
5= Less than 5 occurances recorded

(L) = Lowland occurrences only
(H) = Highland occurrences only
