

Spring is an exciting time of the year for farmers! Planting crops so you have another harvest is what it is all about! ***What about the crop that is still in the bin from last year?*** Maybe you are waiting for the market prices to go up. Maybe you harvested the crop when the weather was not as good as you wanted it to be, but you harvested it anyway and now the moisture is still a little higher than it should be in the bin. ***How do you handle that?.....continue reading***

.....Running the fans when the outside air temperature and humidity to get the grain to the right moisture is key. ***How do you monitor that when you are in the field planting?*** If you miss the opportunities to run the fans with the right conditions can only make things worse.

The StepsGMS App, Temperature/Humidity Switch will work for you while you are in the field planting It watches for the right conditions and turns the fans on/off automatically. You can turn the fans on/off manually from your smart phone with the StepsgGMS App

The StepsGMS App, Temperature/Humidity Switch is easy to connect to your fan motor starter, down load the StepsGMS App to your smart phone and pair the switch to the app on your phone! WiFi is required at the switch. We can help you with that as well We have switches in stock for immediate shipment! They are only \$395.00 each! If you buy 2 or more receive 10% off your entire order with FREE shipping. This is a limited time offer and you must email info@stepsgms.com or call 260-624-5969 to receive the discount.

***DON'T IGNORE LAST YEAR'S CROP IN THE BIN WHILE YOU
ARE BUSY IN THE FIELD PLANTING ANOTHER CROP!***
