**Only**  
**\$395.00**  
Per Fan

### STEP 1

Our focus is on grain storage. Knowing when to run your fans when the conditions are right. The Smart Switch will automatically turn on/off the fans according to your settings. In real time you can read the current temperature/humidity at your bin site, change your settings, or simply monitor the current conditions. You will need: a smart phone and WiFi at the bin site. NOTE: you can purchase a hotspot from your local cell phone store to provide WiFi.

This is a simple and affordable solution to ensure the best ROI on your investment!

Picture of Cable

### STEP 2

Adding a temperature sensor in the grain can help identify potential problems before they arise. The Steps Bin Monitor includes a cable, up to 36' with one temperature sensor, additional sensors can be added at an additional cost. This allows you to know your grain temperature as well as head space temperature and humidity at any time.

**\$595.00**

Includes Cable  
up to 36'

**\$215.00**

Additional Sensor

**\$485.00**

12' Wire Included

### STEP 3

Humidity control: Adding a Plenum Sensor to your low temp heater gives you the precise temperature and humidity readings of what is going into your grain allowing you to dry your grain in the bin. Control your low temp heater from your smart phone with the free downloadable app from Steps GMS.

**\$295.00**

#### Additional Option:

Grain too dry? Add humidity using Fogging nozzles with the ability to control from your smart phone.
