

## USER STORY: DURFEE HIGH SCHOOL

SelecTech, Inc. recently installed 8,000 square feet of its FreeStyle commercial flooring at Durfee High School in Fall River, Massachusetts. Durfee was undergoing significant renovations, including the conversion of a 30-year-old academic building into administrative offices. The installation of the new flooring took place in that building for those new offices.

"One of the challenges of renovating an older building is ripping up old floor tiles to install new ones. It can greatly increase down time and the cost of a project," said Thomas Ricciardelli, President of SelecTech, Inc. "Durfee liked the fact that our interlocking tiles could be installed over the existing floor without messy, time-consuming removal work or prep."

“

We needed a floating floor that was able to be installed over uneven surfaces. FreeStyle was the right choice for us. The installation couldn't have been easier. We are thrilled with the product and feel this will be a regular fix for both new construction and renovation products.
