COVID-19 POLICIES & SAFETY PROTOCOLS

The health and safety of our families, event attendees, volunteers, and staff remain a top priority for the Down Syndrome Guild of Dallas. We aim to provide safe activities across all age groups; however, please recognize that there are certain risks associated with attending in-person events of this nature. We know that each family must weigh those risks and make the best decision for their circumstances and individual needs.

Moving forward, many of our programs will be offered in both virtual and in-person formats as resources allow. In order to help reduce the spread of the COVID-19 virus at in-person events, the Down Syndrome Guild of Dallas highly encourages masks for ALL, frequent hand sanitizing, and distancing when possible at all indoor events. Please know that these COVID-19 policies and safety protocols are subject to change as new information and recommendations from national, state, and local leaders emerge. Events taking place at venues around the community may also have different policies that will be communicated with as much advance notice as possible.

By registering and attending a Down Syndrome Guild of Dallas event, it is understood that you have read these policies and safety protocols and accept the risks associated with attending such an event. The Down Syndrome Guild of Dallas assumes no responsibility should you or your family members test positive for the COVID-19 virus after attending one of our events.

If you or your family members are experiencing any symptoms of the COVID-19 virus, we ask that you please notify us and remain home to help reduce the spread to our high-risk population. If there is a fee associated with the event, the DSG will issue a credit to your account with notice of illness. We also ask that you please notify us if you or your family members test positive in the days following an event so we can inform others of possible exposure. Names and other identifying information will always be kept confidential.

For additional information about COVID-19 and Down syndrome, please visit our COVID-19 & DS Resource Page.
