

HEARING AND DOWN SYNDROME

RESEARCH STUDY

Receive a **FREE** hearing test as a part of our research study today!

WHY PARTICIPATE?

Help scientists improve hearing and balance healthcare for individuals with Down syndrome of all ages.

WHO CAN PARTICIPATE?

People with Down syndrome who:

- Are between the ages of 5 and 65 years
- Who do not wear a cochlear implant

**Participants must be accompanied by a study partner.*

About the Study

Researchers at the Crnic Institute and Boys Town National Research Hospital are working together to better understand hearing and balance in people with Down syndrome. This research study offers a single appointment to test your hearing and give a biological sample. Participants will receive hearing and balance test results and join one of the largest biobank studies for Down syndrome research.

WHAT IS INVOLVED?

1. Complete game-based hearing and balance tests and receive immediate results
2. A simple blood draw, a quick mouth swab and allowing researchers access to your health information

Compensation is provided for both studies.

This study is open to individuals both with and without hearing loss.
