

04.19.2024

Hello Orange Door Parents,

We had a great week! The children learned about Outer Space this week. They learned that one of the easiest ways to teach your preschooler about outer space is to start with the sun and planets. Explain that the sun is a star and it is what gives light and life to our solar system. The planets orbit around the sun. Some planets are bigger than others and some are closer to the sun than others.

Art- The students made U.F.O.'s this week using paper plates, crayons, glue, and gems. They made aliens with paint, their hand prints, construction paper, glue, and markers to write their names. They made rocket ships, using square pieces of construction paper to write each letter of their name, then they glued the letters in order on paper. They added, glitter stars and fire at the bottom with construction paper. On Friday they worked on their journals.

Circle Time- we are continuing to have one student per week come up to the board and go over the calendar, the days of the week, the months of the year, the sounds of the letters, and the numbers up to 30.

Music and movement- This week Mrs. Michelle, the music teacher, brought her small drum, and showed the students how she plays it using kitchen utensils such as a spoon and a fork. At soccer  the kids played four corners, and worked on controlling the ball with their feet.

Next week will be Outer Space Part 2.

We hope you enjoy your weekend!

Mrs. Miriam and Mrs. Melanie
