Hello Orange Door Parents!

We hope you had a nice week. This week the theme was Outer Space. The students learned that the sun is a star. The Sun may look like a big, bright circle in the sky, but it's a giant star, the moon changes shape. A year on Mercury is shorter than a day, Mars has dust storms, astronauts float in space, and shooting stars aren't really stars.

Art- The students made telescopes using paper towel rolls, paint, foil, and stickers. They made the planet Earth using paper plates, tissue paper, crayons, and glue. They made astronauts using paper plates, scissors, markers, and glue. They made a solar eclipse using construction paper, crayons, scissors, and glue. On Friday they worked in their journals.

Music and movement- The music teacher is under the weather and was not able to make it this week, however, the students danced and moved every day. The students had a blast this week in soccer and learned a new game with Mrs. Jackie.

Next week we will be learning about Cinco De Mayo.

We hope you have a great weekend!

Mrs. Miriam and Mrs. Melanie
