

08.05.2022

Dear Parents,

Summer fun is coming to an end, next week we will meet again until Thursday when we have an early release (2.30 PM). It has been really fun sharing this time with your children!

This week was Engineering and Crafts Week!

During this week the students became little engineers, we learned that there are six main branches of engineering, we discussed what a pulley is, we read about the invention of the wheel and we talked about air resistance. We also read about helicopters, electrical power from the wind, space scientists and a trip to the moon. The students made a pulley, a racing car, and a helicopter.

The children made a silly monster out of yarn and a pipe cleaner and they seemed to love those little creatures! They made a spinner from a CD and old markers and a "Pass It On" happy face using dry clay. The children were very busy 😊

We also took advantage of the weather on Monday and ate outdoors (picnic time!), it was breezy and pleasant.

We enjoyed storytelling on Friday, in-house field trip.

COMING UP...

On Site Fieldtrip-Wednesday the 10th- Science Circus

Kids for Kids closes at 2:30 on Thursday the 11th.

We will be Closed on Friday the 12th for professional development in the morning.

Open House on Friday the 12th., beginning at 3:00pm

Enjoy the weekend!

Ms. Audrey
