

07.05.2024

Hello Gold Door Parents,

What an amazing and fun filled week we had! This week we welcomed Ms. Melanie into our classroom and we had a great time together! Along with our STEM learning, our letters, numbers, and tracing skills, we also played lots of bingo games (letter, shapes, and number bingo)! The students would win stickers if they got bingo, and this was their favorite game of each day!

This week in STEM we continued to focus on the importance of water play and how flotation, wind power and flow have an impact on them. Students constructed roofs for a house and tried to build a roof that would not leak. They all had wonderful ideas, and problem solved together, while working in teams of two. They tested their roof's by spilling water on top of it, and if their roof leaked, they would have another chance to try again.

In art this week, we made art projects for the Fourth of July. We made bracelets using beads, and pipe cleaners. We made windmills using markers, and a windmill kit, and the class favorite was our Fourth or July hats that the students made using paper, jewels, glue, markers, and crayons.

This week, we are continuing to practice our handwriting skills by writing different letters and drawing a picture for each.

I hope you have a wonderful weekend!

Kindly,

Ms. Melanie
