

FOR IMMEDIATE RELEASE

FoodSafe Drains to Showcase Advanced Sanitary Drainage Solutions at PACK EXPO 2025

Revolutionizing Food Industry Drainage with Superior Sanitary Design and Durability

[FoodSafe Drains](http://foodsafedrains.com/), a leading provider of hygienic drainage solutions, will showcase its latest innovations at Pack Expo Las Vegas, September 29th - October 1st, 2025. Attendees can visit booth N-7250 to explore demonstrations of the company's most advanced products and learn about the innovative range of FoodSafe drainage products, specifically designed to meet the stringent hygiene standards required by the food and beverage industry.

On display will be the 10,000 Series FoodSafe Slot Drain, engineered for the most demanding, highly regulated food and beverage facilities. Offering top-tier sanitary design and durability, and built from T304 or T316 stainless steel, the 10,000 Series provides exceptional resistance to corrosion, ensuring long-lasting performance even in harsh environments. The system features a slotted linear trench opening available in multiple slot sizes, 1/2", 1", and 1 1/4", to accommodate varying drainage needs and flow rates, making it ideal for handling large volumes of liquid without clogging. Its standard 0.5% slope ensures efficient water removal and prevents accumulation, which is critical for maintaining strict hygiene standards.

Experts will also be on hand to discuss FoodSafe Drains' Renew Services, a comprehensive program dedicated to replacement, upgrade, and improvement solutions for drainage systems within the food and beverage industry. In recent years, the industry has seen a troubling increase in foodborne illness outbreaks, including listeria and other harmful contaminants. Investigations frequently trace these incidents back to failing drain systems in food production facilities. Renew Services from FoodSafe Drains directly addresses this challenge, providing facilities with targeted solutions to modernize and enhance their infrastructure, improving both operational efficiency and workplace safety.

Additionally, visitors to booth N-7250 will have the opportunity to witness live demonstrations of these cutting-edge drainage solutions across multiple demo tables. The FoodSafe Drains team will be on hand to showcase the superior performance and maintenance ease of products, and Viking Kristjansson, Vice President Sales Engineering & Partner Development at FoodSafe Drains, will be presenting at the show. Attendees will learn how these solutions can improve facility safety and sanitation, reduce maintenance costs, and ensure compliance with industry regulations.

About Global Drain Technologies (GDT)

Global Drain Technologies is a leader in manufacturing drainage products and systems, providing innovative solutions tailored to industry-specific needs. Through GDT's FoodSafe Drains Division, GDT delivers specialized drainage solutions for the Food and Beverage sector.

Additionally, GDT offers a comprehensive range of interior and exterior drainage solutions for both residential and commercial applications. GDT's Landscape Drains products are designed for exterior use, enhancing residential and commercial properties with the benefits of our Slot Drain technology. As the inventor of the Slot Drain, GDT offers unparalleled expertise in integrated drainage solutions for both new construction and retrofit projects. GDT's approach emphasizes value-added design, manufacturing, and product delivery, ensuring that products are hygienic, easy to clean, and maintain. GDT is committed to providing industry-leading service, support, and engineering.
