- Text supports both social studies and science curriculum topics for cross-curricular learning
- The engaging subject matter encourages readers to apply science concepts to everyday activities, such as looking at the stars
- A quiz at the end of each volume allows readers to test their comprehension and retention skills

Map the Stars!

It's fun to map the stars in the night sky, and each constellation has a story behind it. Readers discover the stories behind the discovery and naming of some of the most popular constellations, including Andromeda, Orion, and Gemini. They also look at these collections of stars from a scientific angle by exploring facts about the most important stars in each featured constellation. Detailed photographs and diagrams of the stars immerse readers in the fascinating world of stargazing.
