Deploying Learning Assistants Online **—Tips from LA Instructors**

Laura Ríos and Stamatis Vokos, team members of the Mechanics of Inclusion Project and professors at Cal Poly-San Luis Obispo, will highlight how to best prepare Learning Assistants (LAs) to create a positive and rewarding experience for them and the students they work with in online/hybrid classes. They will focus on pedagogical orientations that will be helpful for LAs, and how to approach weekly content preparation to help your LAs be effective in class.

Register now to learn how to effectively deploy learning assistants!

Faculty Experiences

"I found it incredibly challenging to manage breakout rooms effectively and efficiently in ZOOM. The LAs were immensely helpful in this regard. Without them, I don't think I would have been able to use the breakout rooms at all, or at least not as effectively. This would mean the students miss out on working together and all the benefits that come with those peer interactions."

"Students connected more easily to the LAs as their peers. Since connection is very difficult to build in virtual environments, this was very important to the success of the class."
